Analysing the polarisation state of an electromagnetic field

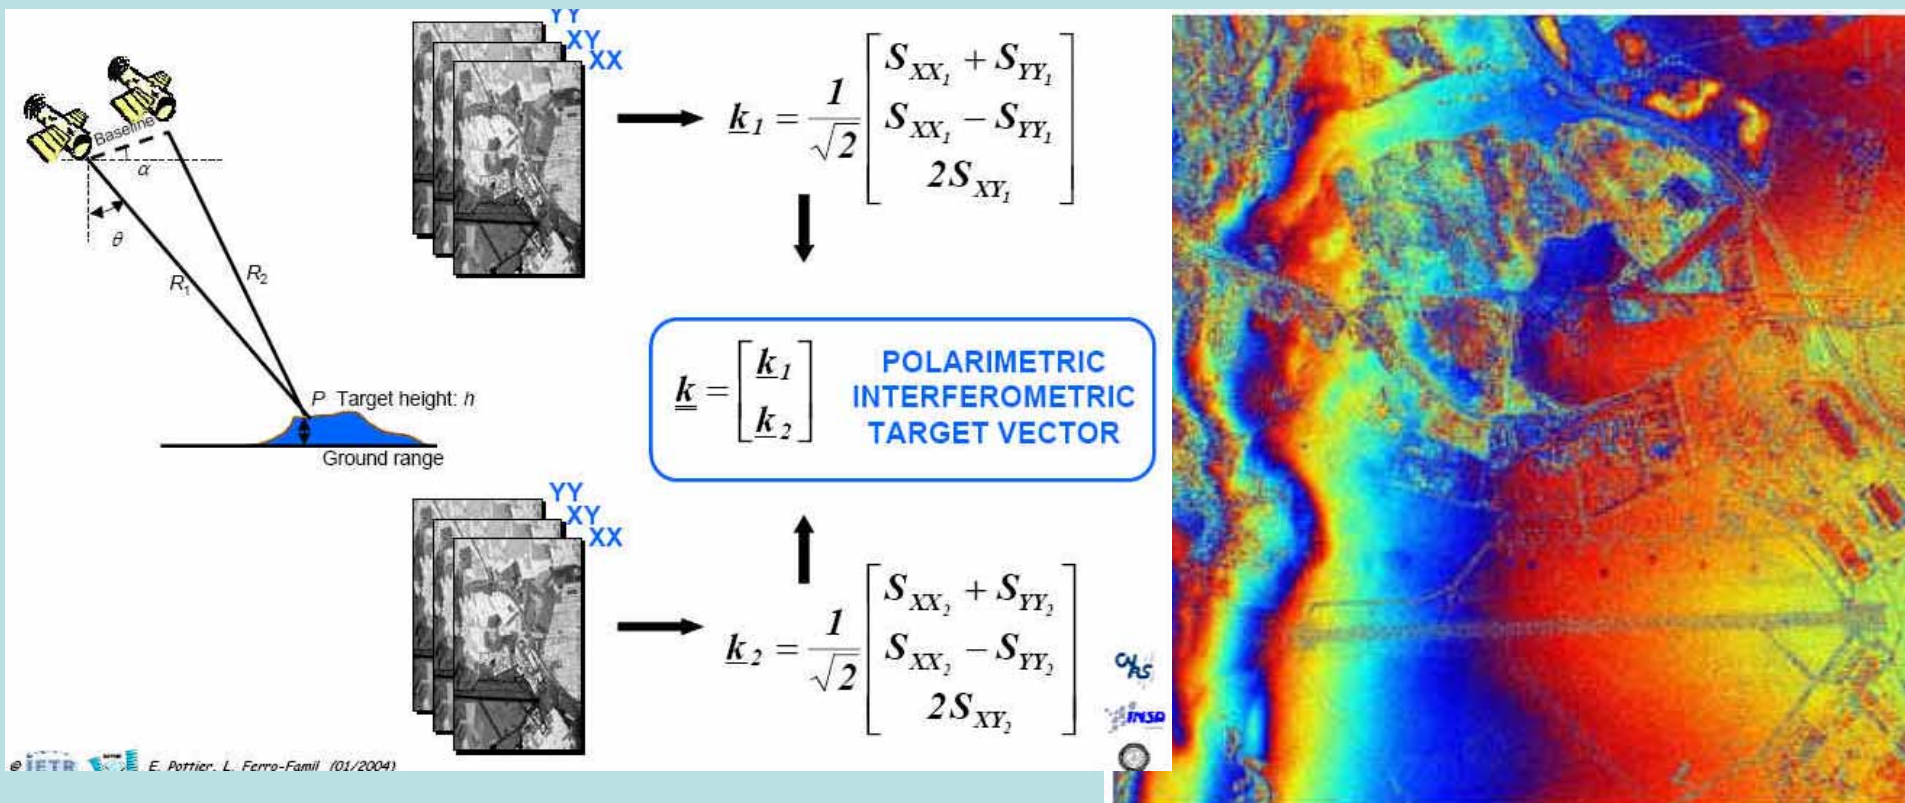

Highly related to –

- Geometrical shape, structure, orientation and reflecting properties, and,
- Geophysical properties such as surface roughness and moisture content of objects and surfaces.

Target recognition and detection of both point and distributed objects

PolinSAR

The phase difference between two or more image data sets acquired from similar or the same SAR separated spatially by a short distance gives information on topography and with multiple datasets, changes in topography or height.

Measure height, displacement and motion

- **46 flight days over a 3-month period, 21st July to 23rd Oct.**
- **15 bases in 9 countries**
- **648 flight lines collected at 201 sites in 18 countries & territories**
- **54,623 km of flight-line data**

The cover of the PACRIM 2 report features a photograph of a white aircraft with NASA and CSIRO logos on the tail, flying against a blue sky. The title 'PACRIM 2' is in large, bold, orange letters. Below it, the subtitle 'AIRSAR Deployment, Aug-Oct, 2000' is in black. The main title 'Scientific Objectives' is in large, bold, black letters. Below that, it says 'Compiled and edited by:' followed by the names and affiliations of Ian Tapley, Tony Milne, and Ellen O'Leary. At the bottom, there are logos for CSIRO, UNSW, and the AIRSAR project.

**AIRSAR data provided to >400 PI's
from 20 PacRim countries in 3
missions**

- **Forestry and vegetation**
- **Agriculture**
- **Coastal analysis**
- **Geology & tectonic processes**
- **Interferometry**
- **Disaster management**
- **Urban & regional development**

Define the impact of mine waste dispersions on the biodiversity of the Fly River flood-plain ecosystem, PNG

Mapping and inventory of mangrove and wetland vegetation communities in tropical regions

Are radar data suitable for defining the biomass and species composition of mangrove populations under threat from environmental impacts?

Thailand - AIRSAR bands Cvv/Lhh/Phv (RGB)

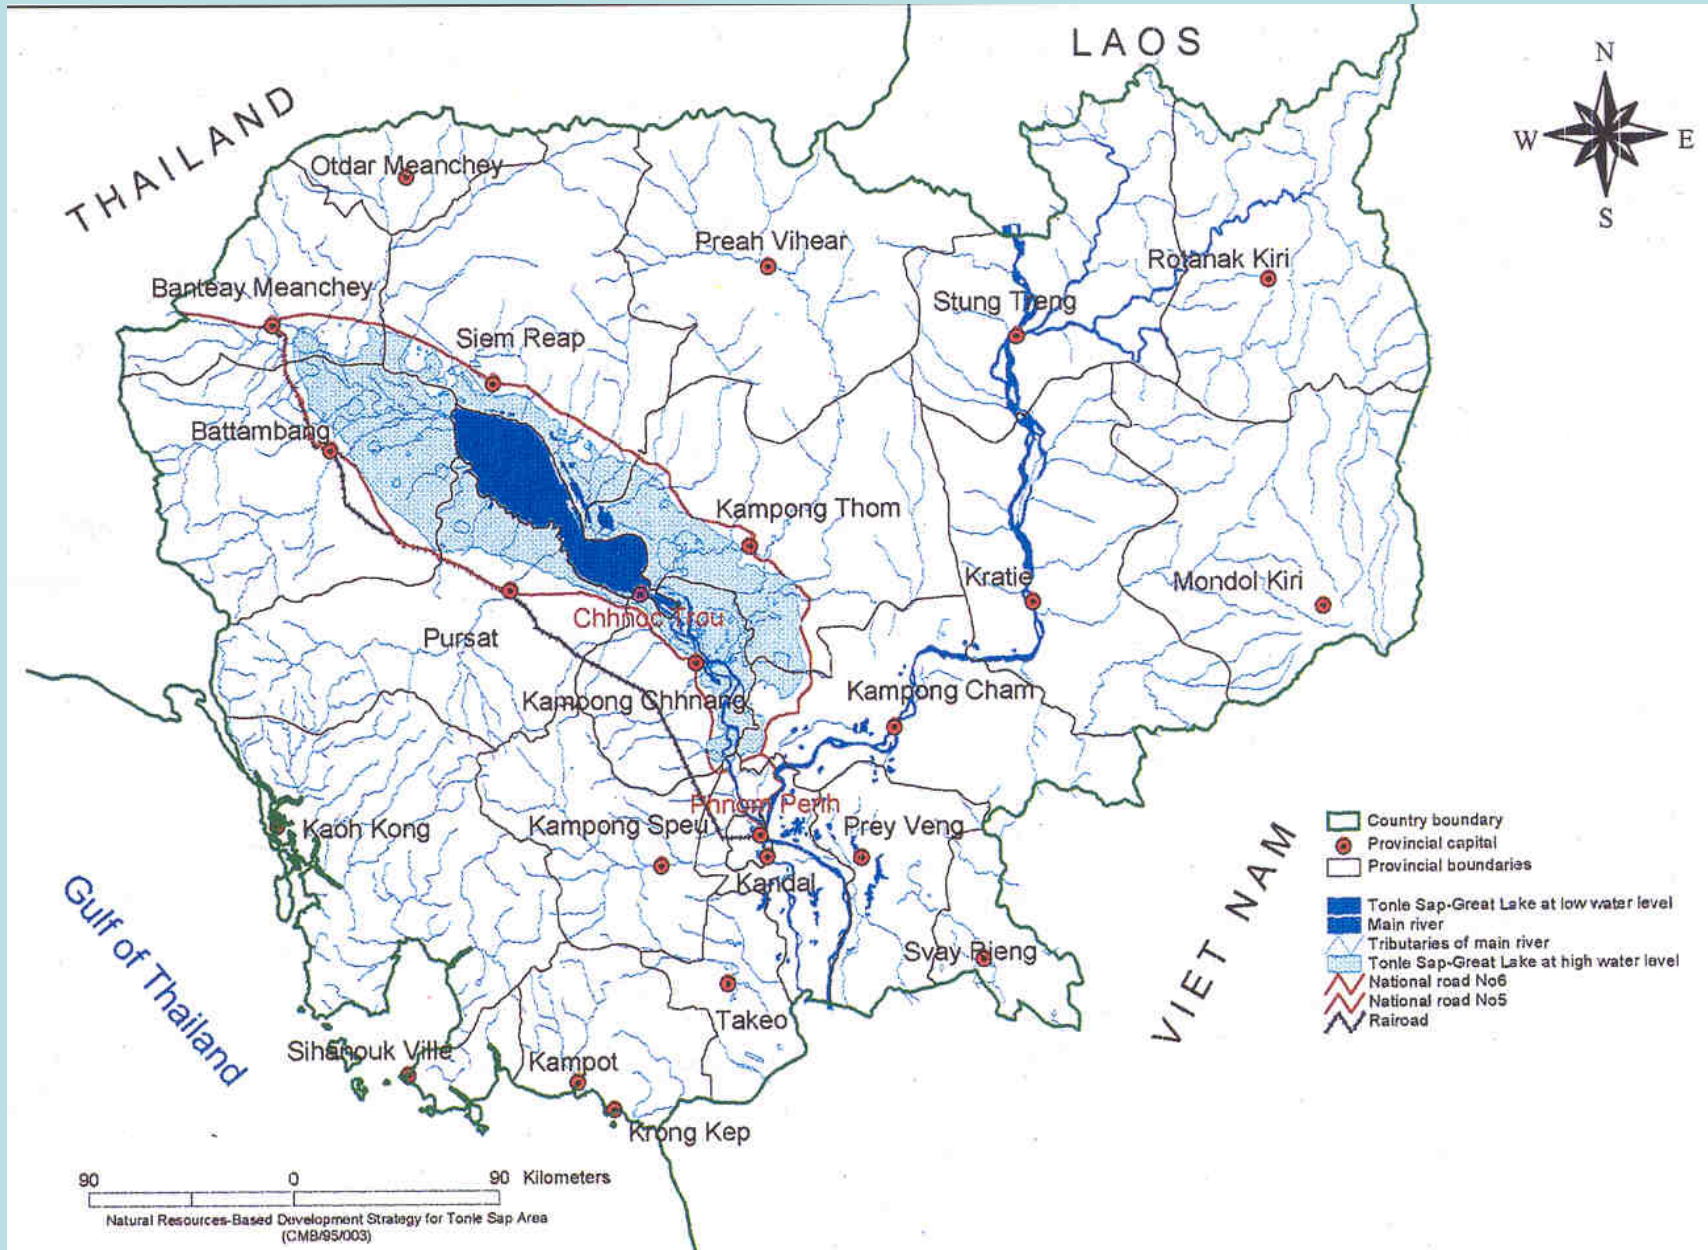

Land-cover mapping, crop inventory and agricultural practices

Kedah, Malaysia – radar's sensitivity to vegetation types and density permits the mapping of rice paddy-fields, rubber and palm-oil plantations.

Coastal Pannay, Philippines – detecting the replacement of mangroves with aqua-culture.

Tonle Sap Great Lake

Reconstruction of the Angkorian habitat, 9-16th century

Reconstruction of the Angkorian habitat, 9-16th century

IFSAR Cwv DEM AIRSAR

ASTER coverage (Bands 2:3:1 RGB) of wetland site adjacent to Lake Tonle Sap, with the locations of AIRSAR field sites discussed in this study. These ASTER data were collected on 10th January 2002.

Closed canopy forest trees (Top) and open canopy forest trees with patches of shrubland and open water (Bottom)

Flooded grasslands

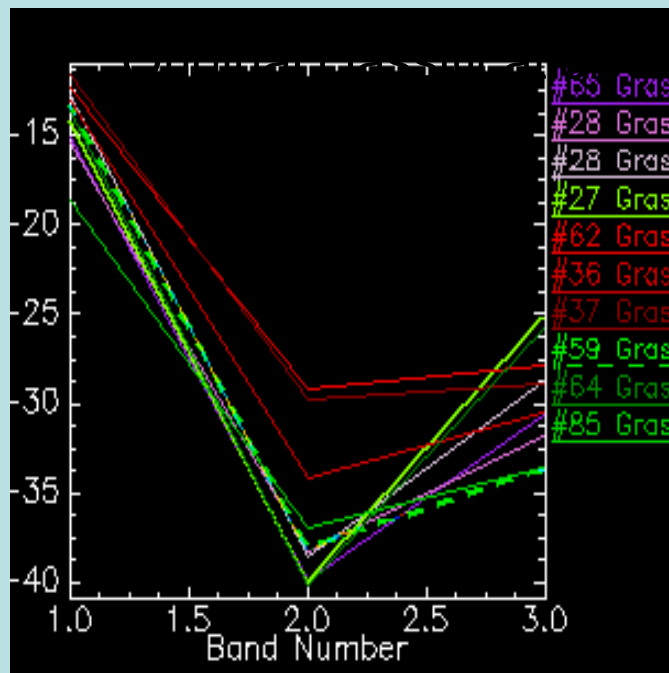

Original data Cvv/Lhv/Pvv

Segmentation: Mean values Cvv, Lhv, Pvv

Original classification

Radar signatures: Cvv, Lhv and Pvv

Final classification

Wetland classification – super classes

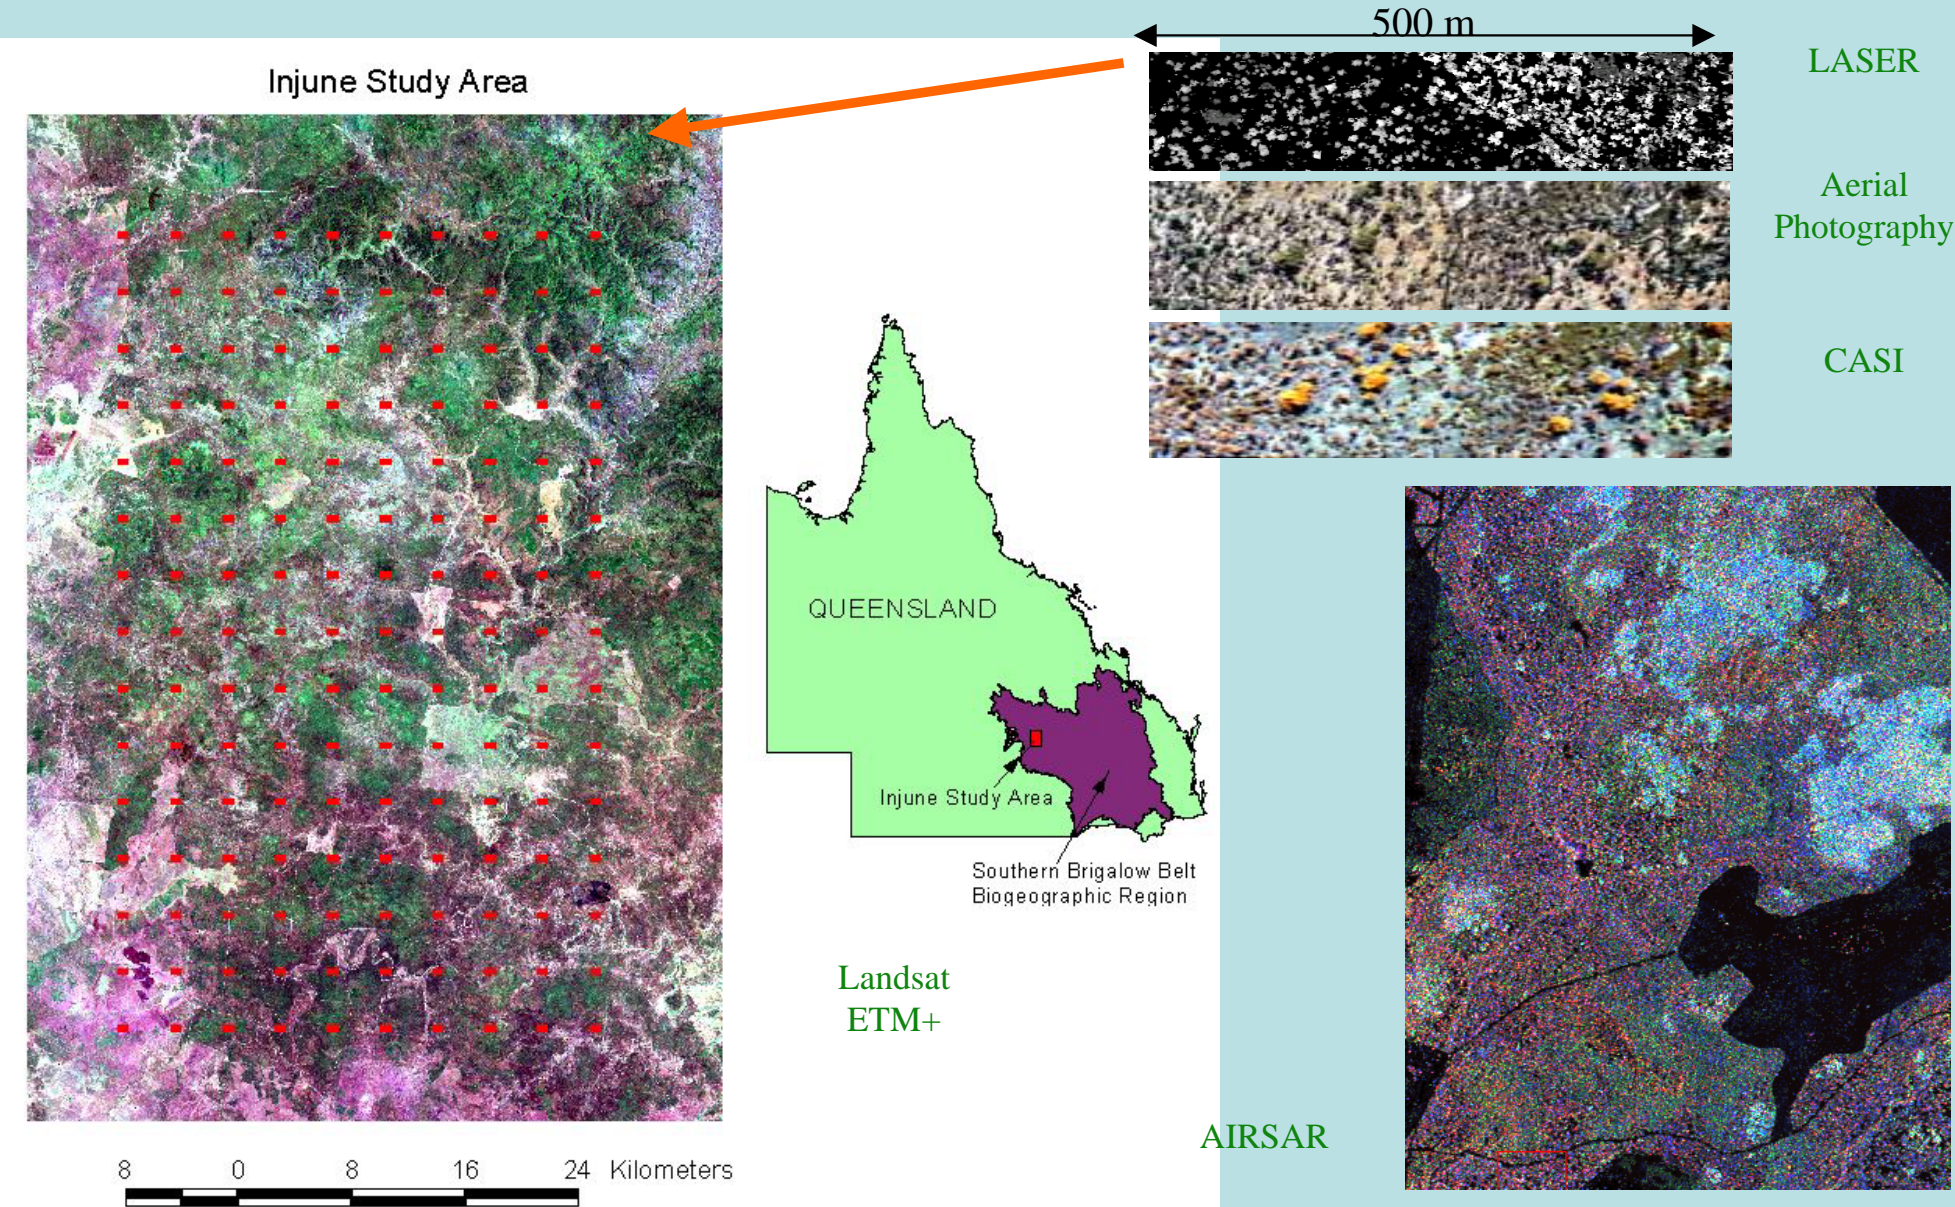

-  Class 1: Water
-  Class 2: Flooded fields / grasslands
-  Class 3: Macrophytes
-  Class 4: Shrubland
-  Class 5: Forest trees
-  Class 6: Irrigated ricefields
-  Class 7: Non-stuff

Class distribution:

- Class 1: 44.0%
- Class 2: 5.8%
- Class 3: 12.3%
- Class 4: 13.2%
- Class 5: 24.3%
- Class 6: 0.4%

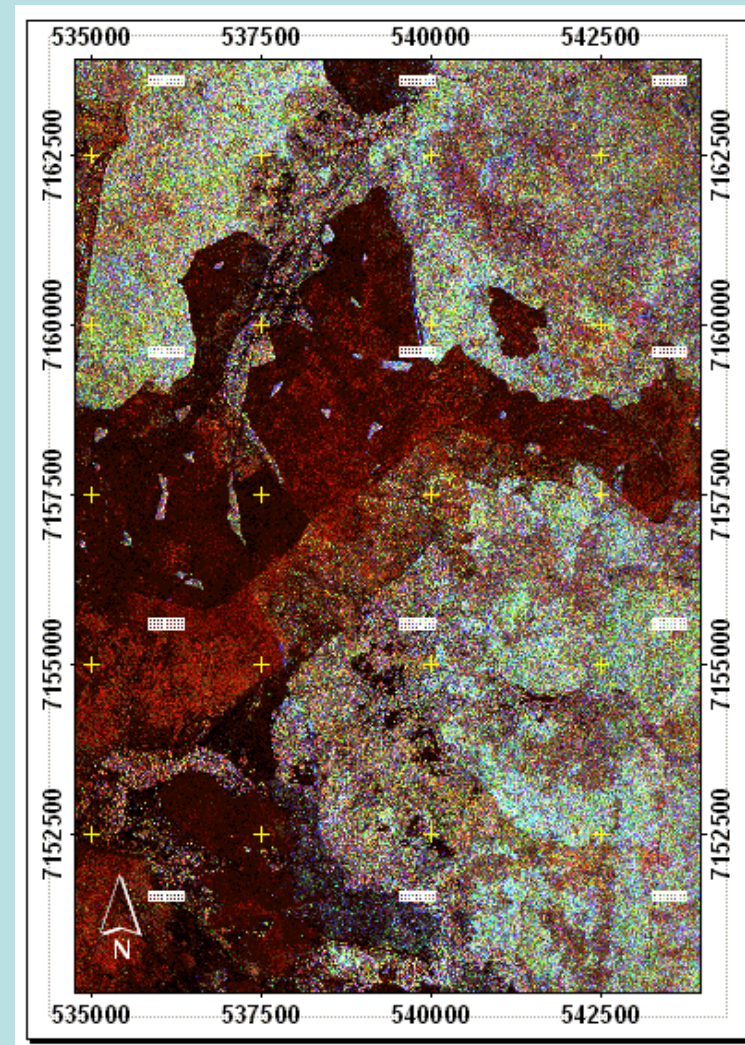

Remote Sensing Data Acquisition: Injune

AIRSAR (POLARSAR) data

- 4 strips of NASA JPL AIRSAR data acquired (12.5 x 80 km)
- Full range of forest types.
- Incidence angle variation from $\sim 30^\circ$ to 60° .
- Fully polarimetric
 - HH, VV and HV.

GeoSAR

GeoSAR Components

- Two X-band antennas
- Antenna Positioning Measurement Unit

- Two P-band antennas
- 20m / 40m dual baseline

Flight Characteristics

Collection Height:
10,000m to 12,500m MSL

GeoSAR Product Characteristics

	X-band	P-band	
<u>DEM height accuracy</u>	Single swath	0.5-1.2 m (Relative)	1-3 m (Relative)
	Mosaic	~1.0 m (Absolute)	1-4 m (Absolute)
DEM resolution	2.5 - 5 metres	2.5 - 5 metres	
Planimetric Accuracy	1 m (Relative)	2 m @ 5 km Altitude (Absolute)	
	< 2.5 m (Absolute)	4 m @ 10 km Altitude (Absolute)	
Ground swath	12 -14 km on each side	12 -14 km on each side	
Polarization	VV	HH and HV or VV and VH	
Pixel Size	1.25 – 3m	1.25 – 5m	

Multi-swath mosaicking and application of Lidar ground measurements results in considerable improvement over single-swath accuracy.

**3D model of AIRSAR bands
Phh/Lped/Cvv (RGB) overlaid
on TOPSAR DEM**

An aerial Synthetic Aperture Radar (SAR) image of a landscape. The terrain is primarily green, indicating vegetation. A prominent black line represents a river or a major road, winding through the scene. Two large, rectangular areas are highlighted in a dark purple color, likely representing specific land use or crop types. The overall image has a textured, grainy appearance characteristic of SAR data.

Thank You

HH:HV:HH (RGB)
